

WRAPSTYLER[©]

Upholstery software
applied to the orthopedic field

Based on 30 years of research & development, Wrapstyler can calculate the covering pattern of any 3D surface.

Wrapstyler was developed with the **major players of the large orthopedic devices industry**. This close collaboration allowed to create an **easy-to-use** and **efficient** tool, producing extremely **reliable** results.

Corset

WRAPSTYLER REVOLUTIONIZES THE PATTERNING OF LARGE DEVICES

- + **Faster** processes
- + **Better** cover quality (deformation simulation)
- + **Easier reproduction** of coverings
- + Patterns **digitalization**
- + **Time, efficiency** and **productivity** gains

HIGHLIGHTS

- + Simple, fast and reliable **flattening**
- + Management of fabric **elasticity**
- + Easy to use **cutting tools**
- + Automatic creation of **notches, flaps** and **assembly notices**
- + Easy **export** to cutting machines
- + Intuitive 2D/3D **synchronized** visualization
- + Numerous standard 3D/2D **import/export formats**

Functioning

3D scanner

Wrapstyler imports meshes in OBJ and STL formats, from 3D scanners or mesh modelers.

🕒 5 min

Base mesh

🕒 2 min

Cleaned up mesh

🕒 10 min

Seams drawn

🕒 2 min

Patterns generated + automatic notches

Feasibility check

Wrapstyler can check the feasibility of the project without you having to make a prototype, thus saving time and material.

It gives precious indications on how to improve the patterns: change in the material, adjustment of the shape or displacement of the seams.

🕒 1 min

Cutting patterns

To communicate with the cutting tools, Wrapstyler uses the DXF AAMA and PDF standards.

Notches and flaps (seam allowances) are created automatically.

Patterns can also be printed and cut with scissors.

🕒 5 min

Assembly notice

The assembly notice is a fundamental document that allows you to easily identify the parts to be sewn together.
